

## LIST OF FIGURES

<b>Fig. No</b>	<b>Fig. Caption</b>	<b>Pg. No</b>
<b>Chapter 1</b>		
1.1	Three Area interconnected power system	1
1.2	Power systems under Deregulation	5
1.3	General structure of a Controller	6
1.4	Block diagram of FLC for AGC	7
1.5	Combinations of Intelligent Techniques	9
<b>Chapter 3</b>		
3.1	Simulink Block diagram of Load Frequency Control (Single Area)	22
3.2	Frequency deviation response for an isolated system with PI Controller	23
3.3	Symmetrical mfs of FLC	25
3.4	Comparison of the Response of PI and Fuzzy Controller	26
3.5	Block diagram for Evolving FLC	27
3.6	Hand-tuned FLC response for frequency deviation without disturbance	41
3.7	GAFLC response for frequency deviation without disturbance	42
3.8	Hand-tuned FLC response for frequency deviation with parametric disturbance	43
3.9	GAFLC response for frequency deviation with parametric disturbance	43
3.10	Hand-tuned FLC response for frequency deviation with Load disturbance	44
3.11	GAFLC response for frequency deviation with Load disturbance	45

## Chapter 4

4.1	Two area thermal non-reheat system with PI controller	48
4.2	Flow chart of GA tuned PI controller	49
4.3	GA PI response for frequency deviation in Area1( $\Delta F_1$ )	53
4.4	GA PI response for frequency deviation in Area2 ( $\Delta F_2$ )	53
4.5	GA PI response for tie-line deviation	54
4.6	Simulink model of a two area non-reheat thermal System with FLC	55
4.7	Fuzzy Logic Controller Structure	55
4.8	Symmetrical mfs of FLC, a for ACE, b for $d/dt(ACE)$ , c for output	57
4.9	GA tuned mfs of FLC a for ACE, b for $d/dt(ACE)$ , c for output of FLC	61
4.10	Plot of frequency deviation in Area -1( $\Delta f_1$ ) with GAPI and GAFLC controllers.	62
4.11	Plot of frequency deviation in Area 2( $\Delta f_2$ ) with GAPI and GAFLC controllers.	63
4.12	Plot of Tie Line power deviation ( $\Delta P_{tie}$ ) with GAPI and GAFLC controllers	63

## Chapter 5

5.1	Structure of Vertically integrated Utility (VIU)	66
5.2	Utility structure after Deregulation	67
5.3	Configuration of a two area system under Restructured scenario	68
5.4	Block Diagram Representation of a two area system after Restructuring	69
5.5	Simulink implementation of Disco participation	71
5.6	Simulink Model of two area AGC under restructured scenario	72

5.7	Fuzzy logic controllers with gains	73
5.8	Structure of Membership function	73
5.9	Comparison of PI, Hand-tuned FLC & GA-tuned FLC response	80
5.10	Response comparison with system subjected to parametric variations	83
5.11	Switching model for Parametric variation in Generator Model	84
5.12	Responses with varying parameters of Generator Model in Area-1	86
5.13	Pattern of random step load disturbance	86
5.14	Frequency response Under Random Step Load Disturbance in Area- 1	87
<b>Chapter 6</b>		
6.1	Pictorial representation of performance indices of various controllers under different testing conditions for an isolated power systems	89
6.2	Pictorial representation of performance comparison of GAFLC and GAPI controllers in terms of Overshoot, Undershoot and settling time	91
6.3	Response comparisons of various controllers under deregulation	93
