

<b>Name:</b> <b>Enrolment No:</b>	
--------------------------------------	--

**UNIVERSITY OF PETROLEUM AND ENERGY STUDIES**

**End Semester Examination, December 2022**

**Course: Optimization Techniques**

**Program: BBA CORE OM**

**Course Code: DSIT 2012**

**Semester: III**

**Time: 03 hrs.**

**Max. Marks: 100**

**Instructions: Usage of calculator allowed.**

**SECTION A**  
**10Qx2M=20Marks**

S. No.		Marks	CO
Q 1	Fill in the blanks, each carry 2 marks.		
1.1	Operations research is a -----to problem solving for executive management.	<b>2</b>	<b>CO1</b>
1.2	Goal programming is applied for the situations which have -----.	<b>2</b>	<b>CO1</b>
1.3	-----refers to problems in which objective function is quadratic in form while the constraints are linear.	<b>2</b>	<b>CO1</b>
1.4	-----, which is essence of operations research, do not take into account qualitative factors or emotional factors which are quite real.	<b>2</b>	<b>CO1</b>
1.5	-----is a condition that exists when there is no solution to an linear programming problem that satisfies all the constraints and non-negativity restrictions.	<b>2</b>	<b>CO1</b>
1.6	In the transportation model, the ----- on a given route is directly proportional to the number of units shipped on that route.	<b>2</b>	<b>CO1</b>
1.7	A network is defined as a set of ----- which are connected by .....	<b>2</b>	<b>CO1</b>
1.8	The variables which specify the condition of decision process and summarize the current 'status' of the system are called -----.	<b>2</b>	<b>CO1</b>
1.9	----- criterion provides the decision-maker with optimistic criterion.	<b>2</b>	<b>CO1</b>
1.10	In the queuing model, the service discipline followed is -----.	<b>2</b>	<b>CO1</b>

**SECTION B**  
**4Qx5M= 20 Marks**

2.1	Distinguish between linear and non-linear programming.	<b>5</b>	<b>CO2</b>
2.2	Write a short note on branch and bound algorithm using example.	<b>5</b>	<b>CO2</b>

2.3	Explain the multiple objective optimization problem using relevant business examples.	5	CO2
2.4	Discuss the gravity location model for facility location planning.	5	CO2

**SECTION-C**  
**3Qx10M=30 Marks**

3.1	Describe the economic order quantity model with relevant business example.	10	CO3
3.2	Find and classify the stationary points of the function $f(x, y) = x^2 + 6y - 3y^2 + 10$	10	CO3
3.3	Explain the importance of dynamic programming models.	10	CO3

**SECTION-D**  
**2Qx15M= 30 Marks**

4.1	Five projects are being evaluated over a 3-year planning horizon. The following table gives the expected returns for each project and the associated yearly expenditures.	<b>15</b>	<b>CO4</b>																																						
<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th rowspan="2">Project</th> <th colspan="3">Expenditures (\$ million)/year</th> <th rowspan="2">Returns (\$ million)</th> </tr> <tr> <th>1</th> <th>2</th> <th>3</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>6</td> <td>2</td> <td>9</td> <td>30</td> </tr> <tr> <td>2</td> <td>3</td> <td>8</td> <td>12</td> <td>50</td> </tr> <tr> <td>3</td> <td>5</td> <td>10</td> <td>4</td> <td>40</td> </tr> <tr> <td>4</td> <td>9</td> <td>6</td> <td>3</td> <td>20</td> </tr> <tr> <td>5</td> <td>10</td> <td>9</td> <td>7</td> <td>25</td> </tr> <tr> <td>Available funds (\$ million)</td> <td>40</td> <td>30</td> <td>50</td> <td></td> </tr> </tbody> </table>				Project	Expenditures (\$ million)/year			Returns (\$ million)	1	2	3	1	6	2	9	30	2	3	8	12	50	3	5	10	4	40	4	9	6	3	20	5	10	9	7	25	Available funds (\$ million)	40	30	50	
Project	Expenditures (\$ million)/year				Returns (\$ million)																																				
	1			2		3																																			
1	6			2	9	30																																			
2	3			8	12	50																																			
3	5			10	4	40																																			
4	9			6	3	20																																			
5	10	9	7	25																																					
Available funds (\$ million)	40	30	50																																						
Formulate the ILP model by constructing the appropriate parameter table.																																									

4.2	Consider the assignment problem having the following cost table.	<b>15</b>	<b>CO4</b>																															
<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th colspan="2" rowspan="2"></th> <th colspan="4">Task</th> </tr> <tr> <th>1</th> <th>2</th> <th>3</th> <th>4</th> </tr> </thead> <tbody> <tr> <th rowspan="4">Assignee</th> <th>A</th> <td>8</td> <td>6</td> <td>5</td> <td>7</td> </tr> <tr> <th>B</th> <td>6</td> <td>5</td> <td>3</td> <td>4</td> </tr> <tr> <th>C</th> <td>7</td> <td>8</td> <td>4</td> <td>6</td> </tr> <tr> <th>D</th> <td>6</td> <td>7</td> <td>5</td> <td>6</td> </tr> </tbody> </table>						Task				1	2	3	4	Assignee	A	8	6	5	7	B	6	5	3	4	C	7	8	4	6	D	6	7	5	6
						Task																												
				1	2	3	4																											
Assignee	A			8	6	5	7																											
	B	6	5	3	4																													
	C	7	8	4	6																													
	D	6	7	5	6																													
Formulate this problem by constructing the appropriate parameter table, and find the optimal solution.
